

# Data Visualisation: Styles guide & Impact

Professor Corri Black

[Corri.black@abdn.ac.uk](mailto:Corri.black@abdn.ac.uk)

# In this section...

**AIM:** Be aware of different styles of data visualisation

- Graphs and tables
- Infographic
- Complex data representations
- Images and narratives

# Graphs and Tables

Simple graphs and tables are where we often start (and end) in our data representation. In academia, it was very common that this was the extent of our visualisation output and aimed at a technical and specialist audience.

Now, with a much greater focus on getting impact beyond academia for our research, we are looking for better tools to communicate our findings and tell our stories to a broad audience.

# Graphs and Tables

A well thought out table and/or graph can convey a lot of information and, if carefully constructed, can convey information effectively to a broad audience

## Think: Audience

- *How long will they give me attention for?*
- *How much effort will they make to understand the message themselves?*
- *Will they be skilled readers of graphs and tables?*
- *Does my graph or table stand alone to tell the story?*

Table 3.  
Ten-Year Mortality Conditional on Surviving the First Year

	No.	Age- & Sex-Adjusted HR (95% CI)	Fully adjusted HR <sup>a</sup> (95% CI)
eGFR ≥ 60, no AKI	7,741	1.00 (reference)	1.00 (reference)
eGFR ≥ 60, AKI	1,325	1.74 (1.60-1.89)	1.44 (1.31-1.58)
<b>AKI vs no AKI for eGFR ≥ 60 group</b>		<b>1.74 (1.60-1.89)</b>	<b>1.44 (1.31-1.58)</b>
eGFR 45-59, no AKI	3,243	1.11 (1.04-1.19)	1.09 (1.02-1.17)
eGFR 45-59, AKI	350	1.77 (1.56-2.02)	1.36 (1.19-1.56)
<b>AKI vs no AKI for eGFR 45-59 group</b>		<b>1.59 (1.40-1.81)</b>	<b>1.25 (1.09-1.43)</b>
eGFR 30-44, no AKI	1,337	1.48 (1.36-1.61)	1.40 (1.29-1.52)
eGFR 30-44, AKI	219	2.16 (1.85-2.52)	1.69 (1.66-2.11)
<b>AKI vs no AKI for eGFR 30-44 group</b>		<b>1.49 (1.25-1.70)</b>	<b>1.21 (1.03-1.42)</b>
eGFR < 30, no AKI	425	2.08 (1.85-2.34)	1.87 (1.66-2.11)
eGFR < 30, AKI	121	2.28 (1.85-2.81)	2.02 (1.62-2.50)
<b>AKI vs no AKI for eGFR &lt; 30 group</b>		<b>1.10 (0.87-1.38)</b>	<b>1.08 (0.85-1.36)</b>

*Note:* Multivariable Cox regression with interaction terms between AKI and baseline eGFR. Adjusted HRs are reported with reference to no AKI and normal baseline kidney function and for baseline eGFR groups calculated using the interaction terms. eGFRs expressed in mL/min/1.73 m<sup>2</sup>. Boldface indicates AKI vs no AKI within each eGFR group calculated using the interaction terms.

Abbreviations: AKI, acute kidney injury; CI, confidence interval; eGFR, estimated glomerular filtration rate; HR, hazard ratio.

<sup>a</sup> Adjusted for age, sex, Charlson comorbid conditions, hospital admission circumstances, *International Classification of Diseases, Tenth Revision* categories for acute hospital admission diagnoses, and with interaction terms between AKI and baseline eGFR.

Using a simplified graph to convey comparisons/position in a league

Audience: Policy makers  
Time: reviewing large amount of data quickly

# Infographics

- While technically referring to any data visualisation it is widely used to describe a particular type of story telling with data
- It aims to transfer a lot of data quickly and to enable the reader to follow the clear story
- Sometimes the temptation can be to include a huge amount of information and the flow of how to 'read' the graphic gets lost

Audience – often policy and public

Time – need to be engaged and interested as the reader has to 'work' a little to follow the story

# SOCIAL DETERMINANTS OF HEALTH

\*\*\*\*\*  
The social determinants of health are the conditions in which we are born, we grow and age, and in which we live and work. The factors below impact on our health and wellbeing.

Childhood experiences

Housing

Education

Social support

Family income

Employment

Our communities

Access to health services

Source: NHS Health Scotland

## Deteriorating patient and sepsis

**60%**

of cardiac arrests, deaths or transfers to ICU followed recognised physiological changes.<sup>1</sup>

Over 40% of people who develop septic shock will die.<sup>2</sup>

**Sepsis** is life threatening and needs urgent attention.

<sup>1</sup> NICE report (2008)  
<sup>2</sup> Mervyn Singer, MD, PhD; Clifford A. Deutschman, MD, PhD; Christopher Warren Seymour, MD, PhD; et al. - JAMA. 2016;315(25):2600-2610. doi:10.1001/jama.2016.0287

## Pressure ulcers

Around 1 in 20 people admitted to hospital unexpectedly will develop a pressure ulcer.<sup>3</sup>

**150**

More than 150 grade 2-4 pressure ulcers are reported from Scotland's acute hospitals every month.<sup>4</sup>

**£3.8m**

Treating pressure ulcers costs the NHS in England and Wales more than £3.8 million every day.<sup>5</sup>

Hospital

## Falls

Fall incidents have been demonstrated to account for 1/3 of all reported patient safety events.<sup>6</sup>

Over 2000 falls are reported in Scottish acute hospitals every month.<sup>7</sup>

<sup>6</sup> Falls in English and Welsh hospitals: a national observational study based on retrospective analysis of 12 months of patient safety incident reports. ## Catheter Associated Urinary Tract Infection (CAUTI)

Over 22% of all Healthcare Acquired Infections are UTI.<sup>8</sup>

4% of patients who are diagnosed with a CAUTI will go on to develop bacteraemia or sepsis.<sup>9</sup>

50% of all patients diagnosed with a UTI had an indwelling urethral urinary catheter (UUC) in the week before the infection.<sup>9</sup>

# Complex data representations

Maps are perhaps the most obvious complex data visualisation – made up of thousands of data items but generated into a limited number of graphical representations that many of us can interpret for ourselves (some better than others!).

Basic maps are for the reader to immerse themselves within

Some maps have been processed for us to help ‘tell the story’

Mapping tools – GPS capturing location and movement; Geographic information system (GIS) software enabling the use of geographical data

# Complex data representation

- <http://www.informationisbeautifulawards.com/news/188-2016-the-winners>
- Have an explore and see what you think
- These are great for engaging the reader...perhaps less so for rapidly transferring simple information
- Be inspired! These are created by teams of people including graphic designers and analysts using specialist software over many months.
- Enjoy but don't worry, this is not the standard we expect in your assessment

# Complex data visualisation

- Animation
- The video of Hans Rosling animating population data is probably the classic data animation.
- A variety of tools are used to tell such engaging narrative stories with data using animation.
- Here is another example <https://www.youtube.com/watch?v=m1k91ynqFIU>
- Animation is probably one of the most engaging ways to present data to a non technical audience as it allows you to take the user with you through the data. Story telling is at the heart of this approach.
- It is, however, not quick to create.

# 10 Take Away Tips-Data Stories

- Pick winners – don't do everything
- Effort should be proportional to impact
- Need some basic skills
- Tools help but not essential
- Think about the message
- Think about the audience
- Think about the context
- Go carefully with images and cartoons
- Don't distort data
- Use colour and layout to tell the story
